A Future-Proof Home for Scottish Hill Running

Open Design

We are retiring the closed system. Our new platform is built on open standards, eliminating the risk of a single point of failure and ensuring the site is accessible, transparent, and easier to maintain for future generations.

Robust Archiving

Every race, runner, and result is now stored as universally readable text. This ensures our complete historical record will outlive any specific web technology or hosting provider.

Community Inclusion

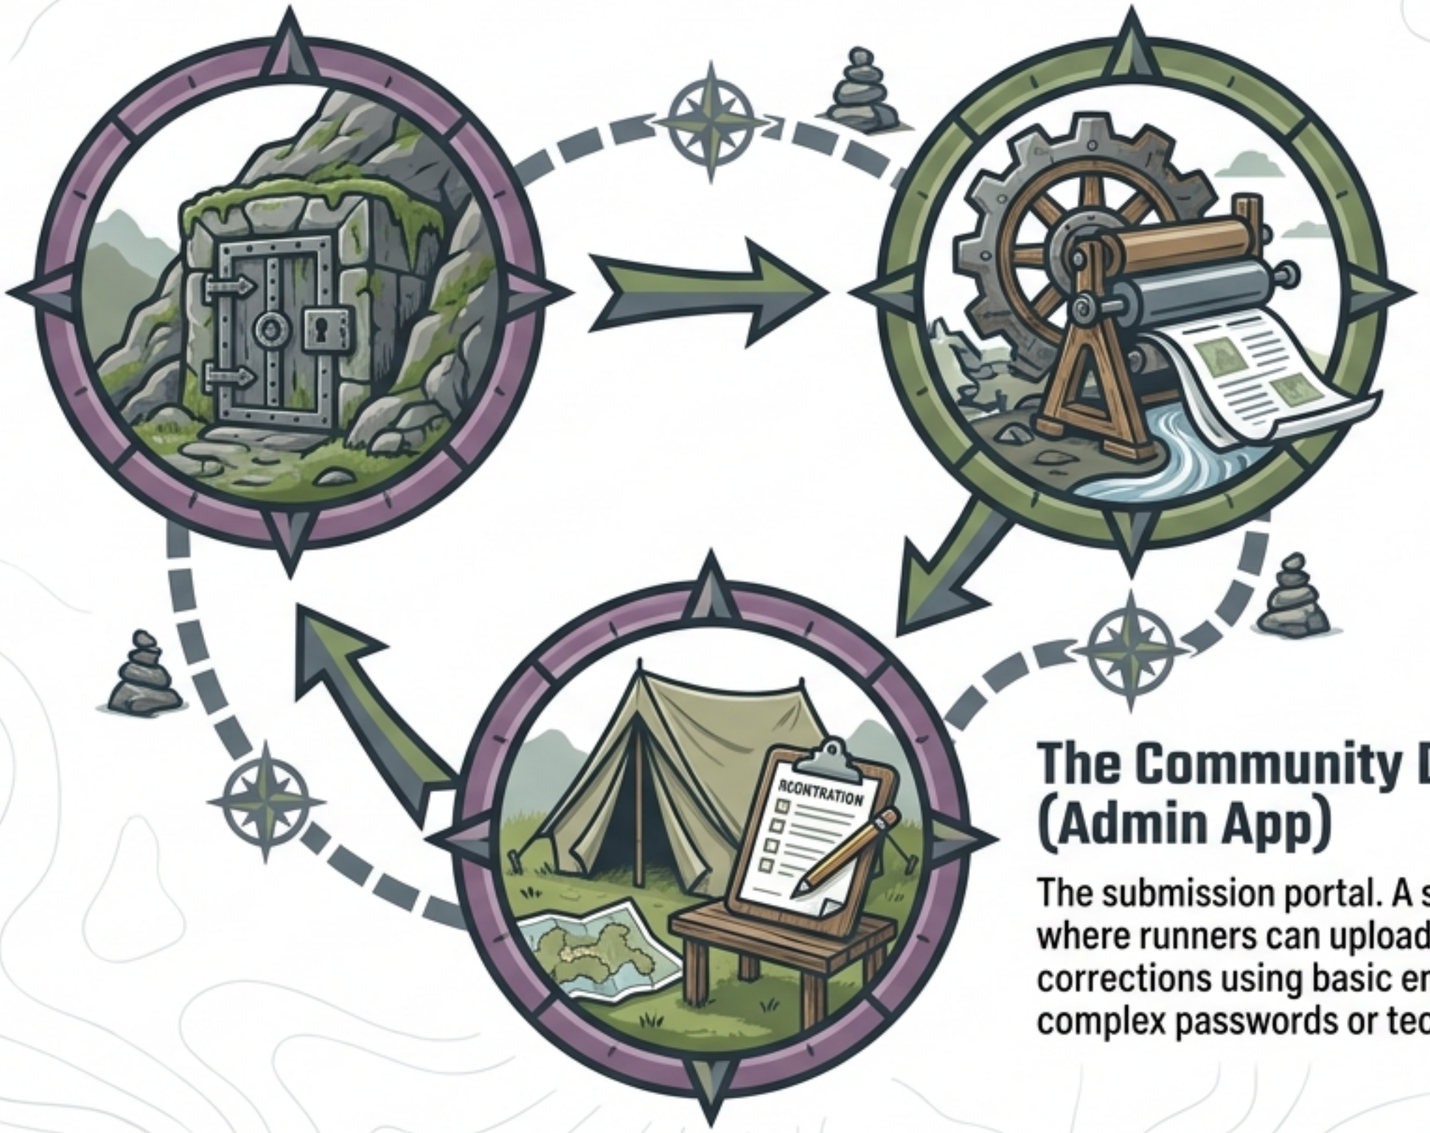
We are opening the doors for runners and race organizers to easily contribute, upload, and correct results directly, removing bottlenecks while keeping the committee in full editorial control.

NotebookLM

The Three Core Environments of Our Digital Ecosystem

The Vault (Fact Store)

The permanent archive. Race results and info are saved as simple, immortal text files (CSV/MD). We own our data forever in an uncorr-ruptible format that requires no special software to read.



The Publishing Engine (Site Builder)

The public face. Automatically compiles facts from The Vault into a lightning-fast static website. No live database means nothing to hack and no server to crash during traffic spikes.

The Community Desk (Admin App)

The submission portal. A simple, lightweight interface where runners can upload results or propose corrections using basic email authentication. No complex passwords or technical knowledge required.

NotebookLM

From Community Submission to Immutable Archive

	Legacy Architecture (ASPX/MSQL)	Modern Ecosystem (Static GitHub)
Community Inclusion	Closed system requiring a solitary webmaster	**Crowdsourced submissions with lightweight email authentication**
Data Longevity	Trapped in a proprietary, fragile database	Preserved as immortal, universally readable text files
Security & Stability	Vulnerable to traffic spikes and database errors	**Uncrashable** static pages with a **complete, unbreakable audit trail**
Committee Role	Heavy IT maintenance and manual data entry	Focused exclusively on editorial review and approval
